| | NW Team 12 - Dimke |

Northwest Incident Activity

New Fires and Acres

14 fires for 132 acres

OR: 4 fires for 0 acres

WA: 10 fires for 132 acres

Large Fire Summary

New large incidents: 0

Reported incidents: 0 (OR: 0, WA: 0)

0 acres growth on existing incidents

Northwest IMT Activity

NIMOs Committed: 0

Type 1 IMTs committed: 0

Type 2 IMTs committed: 0

National Fire Activity

Initial attack activity: Light (83 new fires)

New large incidents: 4

Large fires contained: 1

Uncontained large fires: 17

National IMT Activity

Area Command Teams: 0

NIMOs committed: 0

Type 1 IMTs committed: 1

Type 2 IMTs committed: 7

Nationally, there are 8 fires being managed under a strategy other than full suppression.

Northwest Current Incident Details

Incidents listed below meet large fire criteria and/or incidents with a Type 1 or 2 IMT assigned. Large incidents are defined as fires which are 100+ acres in timber or 300+ acres in grass/brush. For additional information on incidents no longer listed below please refer to the [NW Large Incident Summary](#) or [Northwest Fires Utilizing Monitor, Confine, Point Zone Protection Suppression Strategies \(YTD\)](#)

Incidents not Previously Reported: 0

Incidents Previously Reported: 0

Northwest Fire Weather Summary

Diminishing showers continue over much of the west side of the region today. Wet thunderstorms are expected to develop over eastern Washington and northeastern Oregon later this afternoon, continuing overnight. Thunderstorms are possible again Tuesday afternoon/evening. General winds are expected to increase on much of the east side on Tuesday. Warmer and drier conditions will set in as a ridge of high pressure builds over the region Wednesday into the weekend. Monitor NWS forecasts for the latest local forecasts and advisories for your area.

Northwest Fire Potential Summary

Significant fire potential remains reduced due to the lower fire danger recorded over the last week. Lightning from yesterday through Tuesday elevates the risk of ignitions and holdovers that may not become apparent until warmer and drier conditions set in the latter half of the week.
